May 16th

Morning: 9-13

Lean thinking - Prof. Alessandra Bianco Prevot (1 ECTS)

Lean thinking is a set of principles, methods and techniques for managing processes, which aims to increase the value perceived by the final customer and to reduce systematically the waste. The aim of the lean system is therefore "to do more with less". The Lean thinking method was developed as a foundation of quality in the Toyota company and conceptualized by two university researchers of the Massachusetts Institute of Technology, James P. Womack (American) and Daniel T. Jones (English). At the present time Lean thinking approach has been applied in a wide type of organizations (from manufacturing to no-profit) and can be useful for everyone in the optimization of its life.

This Lean thinking course aims to provide students with theoretical and practical concepts suitable to reinforce soft skills for life (life skills), which include the development of reflective, organizational, communicative and cooperative skills and a general orientation to result and to the continuous improvement of attitudes, behaviours and performances.
